

COCKPIT FLIGHT SIMULATOR

SIMULATION SYSTEMS

➤ Client & Programs Supplied

EADS A330 MRTT

➤ Taks Developed

- Preliminary design
- Detailed Design
- Production and Assembly
- Functional Tests
- Transport
- Installation on clients' facilities

ELIMCO develops simulation systems for many different fields, from real equipment simulation to virtual reality simulations.

In real equipments simulation, ELIMCO develops simulators combining hardware and software elements allowing a learning of the equipment use without risk and a reduction of the training costs (the cost of the real equipment is usually higher than the cost of the simulator).

ELIMCO developed the complete Cockpit Simulator Design, Production and Installation

Display System: TFT Screen

ELIMCO elaborated the Simulator Hardware Technical Description Documents for the Software Development
